Subj: ISE LOGIK INDUSTRIES PROJECT MOISTURE LETTER
Re: Project name and address

Good afternoon

This letter is to confirm that ISE Logik Industries' MVRA 900 moisture vapor reduction admixture was used in the above-named project.

When our MVRA 900 is used, no further field moisture tests such as ASTM F1869 nor ASTM F2170 are required. However, if such testing is conducted, ISE Logik Industries warrants up to 100% RH when the concrete is tested in accordance with ASTM F2170; and up to 25 lbs. when the concrete is tested in accordance with ASTM F1869. Moisture related flooring failures are specifically excluded from most all flooring manufacturers' warranties, adhesive warranties, and flooring installation warranties; therefore, the concrete moisture related flooring failure warranty conveyed through the use of our MVRA 900 supersedes any such warranty that a project may or may not have. In the unlikely event that a concrete induced moisture related issue manifests, be sure to include ISE Logik Industries in any ensuing discussions so that we may assist the project and owner in evaluating the problem.

Please refer any questions you might have with the above directly to myself at decraft@iselogik.com or at P: 585.474.3553

Sincerely,

A handwritten signature in black ink that reads "Dean E. Craft".
